Aim: Exploring Flutter Widgets

Theory:

Images:
- Flutter supports the integration of various image formats, such as PNG, JPEG, GIF, and WebP.
- Images can be displayed using the Image widget, and different aspects like width, height, and alignment can be customized.
- Asset images are commonly used and are declared in the pubspec.yaml file under the flutter section. The Image.asset constructor is then used to load these assets

Fonts:
- Fonts in Flutter can be customized by specifying the TextStyle for text widgets.
- Custom fonts, including TrueType and OpenType fonts, can be used by declaring them in the pubspec.yaml file and specifying them in the TextStyle with the fontFamily property.

Icons:
- Flutter provides a wide range of icons through the Icons class, including Material Icons and Cupertino Icons.
- The Icon widget is used to display icons, and you can customize their appearance using properties like color, size, and opacity.

Button Types:

- Flutter provides various button types, including ElevatedButton, TextButton, OutlinedButton, and more.
- These buttons offer different visual styles, allowing developers to choose the one that best fits the application's design.

Button Properties:

- Buttons can be customized using properties such as onPressed (to define the action when the button is pressed), style (to modify the button's appearance), and child (to set the content inside the button).

Code:

```
import 'package:flutter/material.dart';
import 'dart:ui' as ui;
void main() {
 runApp(const MyApp());
}

class MyApp extends StatelessWidget {
 const MyApp({Key? key}) : super(key: key);

 @override
 Widget build(BuildContext context) {
   return MaterialApp(
     home: HomePage(),
   );
 }
}

class HomePage extends StatefulWidget {
 const HomePage({Key? key}) : super(key: key);

 @override
 State<HomePage> createState() => _HomePageState();
}

class _HomePageState extends State<HomePage> {
 @override
 Widget build(BuildContext context) {
   return Scaffold(body: LoginScreen());
 }
}

void _navigateToItemDescription(BuildContext context, String imagePath) {
  Navigator.of(context).push(
    MaterialPageRoute(
      builder: (context) => ItemDescription(imagePath: imagePath),
```

```dart
      ),
    );
}

class ItemDescription extends StatelessWidget {
  final String imagePath;

  ItemDescription({required this.imagePath});
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      // appBar: AppBar(
      //   title: Text('Item Description'),
      // ),
      body: Padding(
        padding: const EdgeInsets.all(5.0),
        child: Column(
          children: [
            // Search bar above the watch image
            Padding(
              padding: const EdgeInsets.only(
                  left: 20.0, top: 80.0, right: 20.0, bottom: 20.0),
              child: Container(
                decoration: BoxDecoration(
                  border: Border.all(color: Colors.black12),
                  color: Colors.transparent,
                  borderRadius: BorderRadius.circular(8.0),
                ),
                child: Stack(
                  alignment: Alignment.centerLeft,
                  children: [
                    Padding(
                      padding: const EdgeInsets.only(left: 40.0),
                      child: TextField(
                        decoration: InputDecoration(
                          hintText: 'Search',
                          hintStyle: TextStyle(color: Colors.black),
                          border: InputBorder.none,
                          contentPadding: EdgeInsets.all(15.0),
                        ),
                      ),
                    ),
                    Padding(
                      padding: const EdgeInsets.only(left: 15.0),
```

```dart
          child: Icon(
            Icons.search,
            color: Colors.black,
          ),
        ),
        Padding(
          padding: const EdgeInsets.only(left: 315.0),
          child: Icon(
            Icons.mic,
            color: Colors.black,
          ),
        ),
      ],
    ),
  ),
),
// Watch image
Positioned(
  top: 220, // Adjust the distance from the top as needed
  left: 20.0,
  right: 20.0,
  child: Image.asset(
    imagePath,
    // 'assets/watch.png',
    width: 350.0, // Adjust the width as needed
    height: 350.0, // Adjust the height as needed
  ),
),
Padding(
  padding: const EdgeInsets.only(top: 15.0, right: 200.0),
  child: Text(
    "Select Variant",
    style: TextStyle(
      color: Colors.black,
      fontSize: 20.0,
      fontWeight: FontWeight.bold,
    ),
  ),
),
Divider(
  color: Colors.black,
  thickness: 1.0,
),
Padding(
```

```dart
  padding: const EdgeInsets.only(top: 10.0, right: 100.0),
  child: Text(
    "Strap Color: Cherry Blossom",
    style: TextStyle(
      color: Colors.black,
      fontSize: 18.0,
    ),
  ),
),
Divider(
  color: Colors.black,
  thickness: 1.0,
),
Padding(
  padding:
      const EdgeInsets.only(top: 10.0, right: 150.0, bottom: 20.0),
  child: Text(
    "Display Size: 46.4 mm",
    style: TextStyle(
      color: Colors.black,
      fontSize: 18.0,
    ),
  ),
),
Expanded(
  child: Align(
    alignment: Alignment.bottomCenter,
    child: Padding(
      padding: const EdgeInsets.only(bottom: 40.0),
      child: Row(
        children: [
          Expanded(
            child: Container(
              height: 50.0,
              child: ElevatedButton(
                onPressed: () {
                  // Handle first button press
                },
                style: ElevatedButton.styleFrom(
                  shape: RoundedRectangleBorder(
                    borderRadius: BorderRadius.circular(0.0),
                  ),
                  primary: Colors.white,
                ),
```
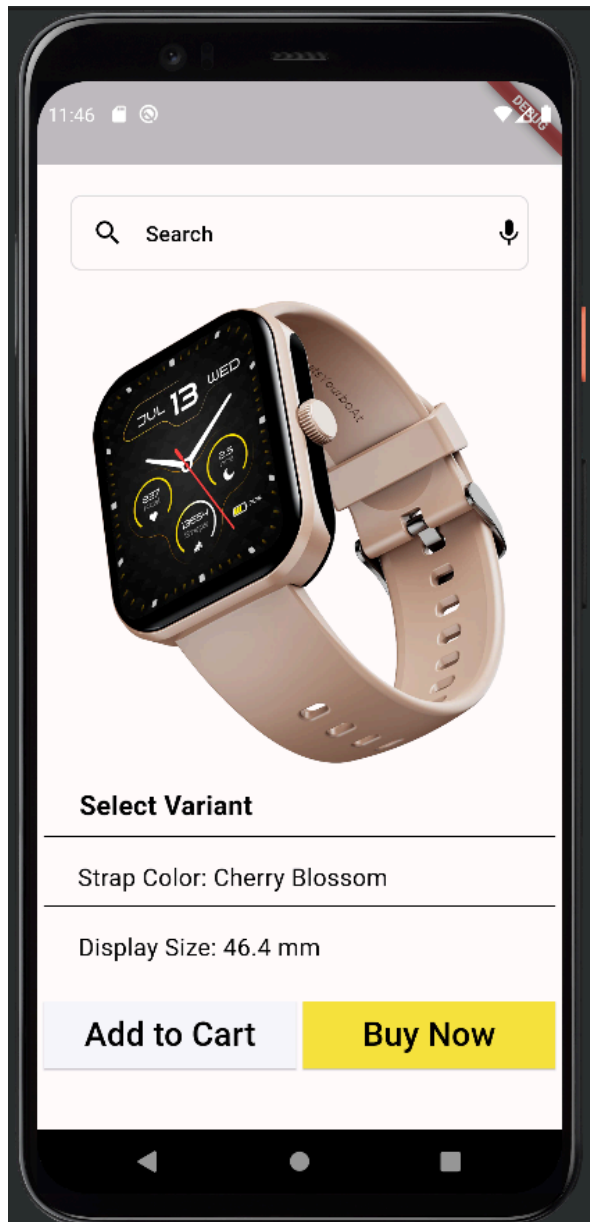

```dart
            child: Text(
              'Add to Cart',
              style: TextStyle(
                fontSize: 25.0,
                color: Colors.black,
              ),
            ),
          ),
        ),
      ),
      SizedBox(width: 5.0),
      Expanded(
        child: Container(
          height: 50.0,
          child: ElevatedButton(
            onPressed: () {
              // Handle second button press
            },
            style: ElevatedButton.styleFrom(
              shape: RoundedRectangleBorder(
                borderRadius: BorderRadius.circular(0.0),
              ),
              primary: Colors.yellow,
            ),
            child: Text(
              'Buy Now',
              style: TextStyle(
                fontSize: 25.0,
                color: Colors.black,
              ),
            ),
          ),
        ),
      ),
    ],
  ),
),
),
),
    ],
  ),
),
);
}}
```

Conclusion:
Thus we studied how to design UI using various icons ,images,buttons.
